

## Grill system

# Grill ceiling/wall system

The DERAKO grill system is made of solid wooden panels. The panels are held in place using aluminium dowel or flexible dowel - aluminium for a flat design and flexible for curved application. The architect determines the dimensions of the grill panels and the distance between them to create panels. The open character of the grill system makes it ideal for acoustic spaces.

## Grill system

The maximum length of panels is 3300 mm and panel width may vary between 300 and 500 mm. The width depends on the chosen panel dimensions and the distance between the individual panels. The minimum measure for panels is 15 x 31 mm. The minimum distance between them is 17 mm, with a maximum panel height of 35 mm. If the panels are higher, the minimum distance between them is 20 mm. The distance between the dowels is always 300 mm. The panels slide into each other using half-edged scarf joints, creating a visual surface continuum. The partition size of the crosscut border join of the panels is 10 mm. The lengths of the grill panels are a derivative of the structural dimensions. The final length standard is determined in consultation with you.

## Ceiling

The made-to-measure panels are fastened to a black carrier using special dowel clips. The panel is mounted to the rail from the facing side. The system is suspended from the structural ceiling. For the skirting and joints, DERAKO has developed a wall profile and an intermediate profile. Just like the dowels, these are black, bringing continuity to the overall experience.

Type 4-55-35-35

## Wall

Just as with the ceiling, each panel is delivered to measure. Using wall clips, the panels are fastened directly to the structural wall. There is no filling panel for the lengthways connection of the wall panels, but an open seam of at least 10 mm instead.

## Curved and other variations

The DERA KO grill ceiling and wall system offers designers and architects much freedom. The panels can be mounted both horizontally and vertically and thanks to the flexible dowel, onto curved walls, too. If the ceiling or wall has a concave, convex or undulating design, then the rails are delivered precisely to curvature specifications. DERA KO staff will be pleased to help you with unusual applications and their practical implementation.

## Outdoor application

The grill system is to be used as an external application under a canopy. The wooden panels are stained on all four sides and the system should be suspended rigidly to the structural ceiling by alternately mounting/clipping the dowel clips in place.

Type 6-25-35-35

## Demounting

The system consists of individual panels, connected using half-edged scarf joints. This makes the system 100% demountable. The panels are demounted two at a time. The clips are demounted from the facing side by hand. Demounting the panels towards the ground at a V-angle reveals the space above. Panels should be remounted two at a time, too.

Type 5-55-15-55

## Construction

- The solid wooden panels can be given a fire resistant treatment;
- Holes are drilled through panels at 300 mm intervals;
- The dowels are inserted into the holes;
- Dowels and panels are fixed to the rear of the panel;
- The system is 100% demountable.

### Brief description

The DERA KO Grill ceiling is a suspended ceiling system made of solid wooden panels, connected either by aluminium dowel or flexible plastic dowels. Acoustic, ventilating, demountable, for both interior and exterior application, as well being ideal as wall cladding.

### Systeemopbouw

DERAKO solid wooden Grill panel ceiling consists of panels of planed panels, interconnected by aluminium or flexible dowels. The panel width varies between 300 and 500 mm and the maximum length is 3300 mm. The panels slide into each other with the help half-edged scarf joints and are fastened to a black T-profile/rail using dowel clips. The system is completely demountable. The rails can be bent into any radius. The grill system can also be used as wall cladding.

Ball impact resistant ceiling Rigid suspension from structural ceiling.

### Materials

|                  |  |
|------------------|--|
| Wooden panels    | Every type of wood that is suitable for a DERA KO ceiling. |
| Moisture content | 8-12% upon delivery.                                       |
| Dowel clips      | Tempered spring steel.                                     |
| Wall clips       | PVC  |
| Dowel            | Aluminium or PVC (flex)                                    |

### Wood species

|                        |                     |
|------------------------|---------------------|
| European Pine          | Light Steamed Beech |
| Siberian Larch         | Sipo Mahogany       |
| Oregon Pine            | Sapeli Mahogany     |
| Western Red Cedar      | Merbau              |
| African Ayous          | Meranti             |
| European Oak           | Asian Teak          |
| American Ash           | Jatoba              |
| White Hard Maple       | Cambara             |
| American Yellow Poplar | Afzelia             |
| Cherry                 | Wengé               |
| American Walnut        |                     |

### Manufacturing methods

The wooden panels are supplied with a planed surface and high quality of varnish.

### Rails & Clips

|             |  |
|-------------|--|
| Rail        | Sendzimir galvanised, 24 mm.   |
| Curved      | If you require a radius, the rails are bent and fixed into the specified radius. |
| Dowel clips | 2 per dowel for ceilings.  |
| Wall clips  | 2 per dowel for walls.   |

### Panel connectors

The Grills are connected to each other lengthways using an intermediate profile, creating a 10 mm seam.

### Surface treatment

The panels can be given a varnish or oil finish. Covering or transparent, colour if so desired.

### Fire resistant

The panels are given a fire treatment using the vacuum pressure method, or they are coated using fire-resistant varnish. DERA KO meets European fire resistance standards (CE).

### Form

DERAKO works according to the design specs of the architect/client. Where technically possible, the size of the panels and partition size may be determined to suit your needs.

### Dimensions

The size of the panels and number of wooden panels depends on the design. They can be made concave, convex or undulating. Panel width is between 300 and 500 mm. Panel dimensions: min. 15 mm thick - 31 mm high per panel. Alternative sizes upon request.

|                |   |
|----------------|---|
| Dowel diameter | 12 mm & 20 mm   |
| Thickness      | minimum 15 mm   |
| Joint          | minimum 17 mm for sizes up to 35 mm high.<br>minimum 20-23 mm for sizes starting from 35 mm high. |

### Samples

Upon request.

### Samenstelling grill plafond

Number of panels x space between panels x panel width x panel height.  
For examples, see table below:

| Type        | width  | Type        | width  |
|-------------|--------|-------------|--------|
| 4-70-15-35  | 340 mm | 4-70-15-55  | 340 mm |
| 5-55-15-35  | 350 mm | 5-55-15-55  | 350 mm |
| 7-40-15-35  | 385 mm | 7-40-15-55  | 385 mm |
| 10-25-15-35 | 400 mm | 10-25-15-55 | 400 mm |
| 3-70-35-35  | 315 mm |             |        |
| 5-40-35-35  | 375 mm |             |        |
| 6-25-35-35  | 360 mm |             |        |

### Optical characteristics

The panels are suspended from the rails using dowel clips which are mounted from the facing side. Depending on the panel dimensions and weight, either 4 or 6 clips are mounted per panel.

### Acoustical characteristics

Depends on material behind the ceiling/wall.

### Sound absorption

Depends on the materials behind the ceiling/wall and the insulating material used.

### Functional Application

Acoustic, ventilating, undulating, concave/convex design, or vertical application.  
Use: interior and exterior.

### Specifications

Stabu, [www.derako.com](http://www.derako.com) or upon request.

### Packaging

Packed and stacked in a box.

### Storage

The panels and fittings should be kept in controlled conditions, with a relative humidity of between 55 and 65%. Cover the panels to prevent discolouration due to UV light.

### Mounting

On site, the wall profile is placed and the suspension points are determined. Fasten suspension materials, hang the rails and suspend the grills from the rail with the help of dowel clips. The spaces should be wind and watertight.

### Mounting manual

[www.derako.com](http://www.derako.com) or upon request.

### Tools

Tradesman's tools.

### Technical service

Technical advice, working plans, demonstrations, project support, mounting assistance, all upon request.

### Maintenance

If cleaning is required, we recommend cleaning the ceiling with a damp, lint-free and non-abrasive cloth, using a simple, non-aggressive (pH=7) cleaning agent as required. It is hazardous to expose the ceiling to aggressive cleaning agents. Try the cleaning agent on a small, inconspicuous area of the panels first.

### Repair

The demountable system offers access to space above the elements. Repairs to the ceiling and any installations above it can be easily conducted.

### Prices

Upon request, per project.

### Terms and conditions

General terms and conditions deposited at Alkmaar District Court.

### Delivery

Free in the Netherlands.

### Levertijd

6 to 8 working weeks, depending on the type of wood, volume and finishing.

### Warranty

10 years on ceilings mounted according to DERA KO instructions.
